(Push button for 3 Seconds)	91	12/24 hour mode select
	92	RGB LED Speed Control
	93	Leading Zero Blank Mode '03' '_3' or '3_'
	94	Number of Seconds to display the Hours
	95	Number of Seconds to display the Minutes
	96	Number of Seconds to display the Seconds
	97	Number of seconds to blank the display
	98	Time Setting Mode HH(red)-MM(yellow)-SS(green)
	99	Clock Speed fine adjust 50=normal,0=fastest,99=slowest

To customize the colour palette, once in menu 92 and the current speed of the Led cycling is displayed, hold down the input button for at least 2 seconds and release the button. As the input wheel is turned each colour is displayed in turn together with its corresponding colour number (with the exception of '7' and '8' which show white). Press the button as each colour is displayed to remove it from the palette. Press the button again to include it back into the palette.

2 GREEN

3 YELLOW

4 BLUE

5 MAGENTA

6 CYAN

7 ORANGE / PINK

8 ORANGE

Setting the Time

To set the time, enter menu 98. The first pair of digits to be set is the Hours, Note that these are only set in the 24hour mode. Turn the input wheel to select the right hours and press the button to confirm. The next digit pair is the minutes, use the wheel to set them as for the hours and press the button when they are correct. The last digit pair is the current seconds, which will be incrementing. If they are correct and you do not wish to reset them (say to synchronize your clock) just press the button to return to the main menu options. Otherwise, turn the wheel at the appropriate time to reset the seconds to zero.

To Blank the Tubes or the Leds turn the input wheel

Turn the wheel clockwise (viewed from the front) to alternately switch on and off the tubes, anticlockwise to turn off and on the Leds.
